

<p>Multiple pregnancies</p> 	<p>Suspicion/Knowledge: usually suspected by ANM or by doctor after abdominal examination.</p>	<p>Refer to CHC/DH. Ultrasound examination would confirm this.</p>
<p>Malpresentation</p> 	<p>Suspicion/Knowledge: Diagnosed by ANM or doctor after abdominal examination.</p>	<p>Refer to CHC/DH. Ultrasound examination would confirm this.</p>

Danger signs in labour and delivery

These danger signs can occur at any time:

- Bleeding (fresh blood)
- Swollen face and hands
- Baby lying sideways
- Water breaks but labour does not start within 24 hours or less
- Colour of water - green or brown
- Prolonged labour - woman pushing for more than 12 hours (eight hours in the case of women who have already had children) with the baby not coming out
- Fever
- Fits
- Retained placenta
